

## Environmental policy

<b>System document</b>	Page 1 of 1	File name: EQ211.doc
Person responsible: ILM	Approved by: MA	Version: 01-06-2010

Mil-tek's environmental policy has been formulated and determined by our declaration of our intentions and principals for the amassed performance and results in the environmental and working environment areas.

The environmental policy forms the basis for action and for setting environmental goals and environmental objectives. Mil-tek's vision is to be Denmark's leading company in the area of waste baling with assembled expertise regarding waste, waste treatment and recycling, economics and the environment.

Mil-tek's main task is to offer solutions in waste compaction and recycling on an environmental and economic basis with high competitiveness.

Mil-tek is aware that waste management – treatment and recycling gives rise to harmful environmental and working environment exposures. The environment and a safe working environment are therefore highly prioritised in the solving of Mil-tek's tasks.

The environmental policy constitutes the overall decisions, which are made in order to ensure consideration to both the environment and the working environment on Mil-tek's machines; and in connection with the activities which have been set and are being set in motion in Mil-tek's production.

Mil-tek therefore commits itself:

- to be at the forefront with environmental and working environment protection in the company's solutions for waste management and treatment.
- to comply with all current laws and regulations that Mil-tek's activities are covered by.
- to work towards minimising waste, using cleaner technology and utilising resources and energy.
- to evaluate chosen solutions and means of action on the basis of an overall view; which includes the environment and the working environment as well as technical skill and economics.

Mil-tek will continually improve its environmental performance by:

- systematically preventing and reducing the harmful environmental and working environment exposures that machines and activities give rise to.
- encourage our suppliers to deliver environmentally sound raw materials, products and services,
- in addition, to openly advise about the environment and working environment to employees, interested parties, authorities and customers together with the public.

Mil-tek's environmental policy is assessed and revised each year in connection with the management's evaluation.
